With the ability to integrate multiple projects within an organization, it provides a unique overview and control. Whether it's a large construction project or a smaller residential complex, Next Project offers a seamless integration of project management, collaboration and financial overview.

Functions that give you a less stressful everyday life

better control over work orders and integrate the finance and payroll systems you already use.

For some companies, a few modules are enough – such as work orders and time planners, while for larger contracts several of the functions can be essential for increased productivity, better overview and generally strengthened project management.

We come from the construction industry and we hate project waste.

We are tailored for the construction industry as we recognise some of the biggest challenges that our customers face come from a lack of control. Piecemeal automation and limited data integration turns projects into a nightmare of stress, burn-out and failure. Low project margins, limited control of sub-contractor, energy and component costs and limited visibility are all symptoms of poor project control. next-tech.com.
