

# Next Insights

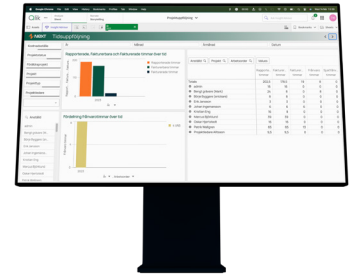

Analyze your projects in real time - with our tailor-made BI tool for the construction industry.

Next Insights is a tool that automatically collects data from all your projects in real time. Building your own dashboards can be time-consuming and expensive. Therefore, we have created ready-made dashboards that show exactly the KPIs you need to get a financial overview of your projects. The tool presents the data in a visually appealing way and gives you a coherent picture of your project finances.

By using different views, you can analyze individual projects in more detail. You can also get an overview of your entire project portfolio. This helps you make wiser financial decisions, take necessary actions and identify areas for improvement – improvements that are otherwise often hard to spot.

## Make your monthly reporting easier

Make your monthly reporting easier with Next Insights. We eliminate the hassle of administration and monthly reporting by giving you direct access to up-to-date figures. This frees up the time you would otherwise have to use to manually compile your reports. Always having your financial status readily available enables quick analysis and makes it easier to make strategic decisions.

## Functions

- Intuitive dashboards with powerful KPIs
- Unique filter functionality
- In-depth analysis of different dimensions of data
- Direct insights into your billable time
- Insights into the income statement per given time period
- Overview of budget and time tracking
- Optimize the use of your resources
- Less time spent on monthly reporting

**We come from the construction industry and we hate project waste.**

We are tailored for the construction industry as we recognise some of the biggest challenges that our customers face come from a lack of control. Piecemeal automation and limited data integration turns projects into a nightmare of stress, burn-out and failure. Low project margins, limited control of sub-contractor, energy and component costs and limited visibility are all symptoms of poor project control. [next-tech.com](https://www.next-tech.com)
